Assignment V

Create a small semantic-web annotated HTML Web Page using SHOE. The topic of the page should be something of interest to you. You should each do your own page, but you may certainly discuss with your classmates issues pertaining to how to construct such pages.

Some further information:

- When displayed the page should not be more than a screen.

- You should also create an associated ontology.

- You should also include at least one inference rule.

- Be certain to also include an explanation in English of what you have done.

I recommend:

1. Study the items on the page

   `http://www.cs.umd.edu/projects/plus/SHOE/`

2. Definitely work through the tutorial
